SUMMARY

AI/ML Engineer building Python-based Machine Learning and Generative AI applications through academic study and hands-on personal projects. Experienced in developing RAG and LLM-powered workflows using LangChain, LangGraph, FastAPI, and vector databases. Skilled in NLP, semantic search, embeddings, AI application development, and workflow automation. Passionate about building practical, scalable AI solutions and applying modern Generative AI technologies to real-world problems

SKILLS

AI/ML and GenAI: Machine Learning, Deep Learning, NLP, Generative AI, RAG, Agentic AI, Prompt Engineering

LLMs and Frameworks: Gemini, OpenAI, LangChain, LangGraph, LangSmith, Hugging Face, TensorFlow, PyTorch, Scikit-learn

Programming: Python, SQL, FastAPI, Flask

Cloud and DevOps: AWS (EC2, Bedrock, Lambda), Google Cloud Platform, Docker, GitHub Actions

Databases and Viz: FAISS, pgvector, Qdrant, PostgreSQL, MongoDB, Tableau, Power BI

EXPERIENCE

AI Engineer Intern *Faucone Consultancy Private Limited, India (Remote)* Sep 2026 – Present

- Building AI-powered automation features for internal tools working across the full loop from prompting to API integration, not just prototyping in a notebook.
- Writing and refining prompts for LLM-based workflows, and testing edge cases to cut down on inconsistent outputs before they reach users.
- Part of a research group putting together an internal report on the AI tools landscape and market demand; my section covers evaluating and comparing GenAI tools.
- Working directly with technical team on live projects picking up how AI products actually get shipped versus how they get prototyped.

Data Science Intern *Afame Technologies, India* Dec 2025 – Feb 2026

- Replaced an old spreadsheet-based forecasting process with a Python ML pipeline trained on 5M+ rows of transaction data accuracy went up by about 20% and freed up roughly 8 hours a week that used to go into manual updates.
- Dug into customer purchase patterns with SQL and Pandas and found three segments the sales team wasn't really targeting that fed into an outreach push that added a 10% lift in market share that quarter.
- Sat in on weekly reviews with product and sales turning whatever the data was saying into recommendations people could actually act on.

Data Analyst Intern *Green Bear Academy, Indore* Oct 2025 – Nov 2025

- Analyzed enrollment data across 2,000+ student records and surfaced patterns admissions hadn't picked up on — targeted outreach to those segments grew enrollments by 15%.
- Built four Tableau dashboards to replace a manual weekly reporting process, saving the team roughly 30% of the time they used to spend compiling numbers by hand.
- Cleaned up messy intake-form data and worked with the ops team to standardize how it gets collected going forward.

PROJECTS

Production RAG Agent with Gemini and PDF Knowledge Base — *LangChain, pgvector, FastAPI, GCP*

- Built a hybrid RAG system dense and sparse retrieval together on top of Gemini 2.0 and pgvector, with a live DuckDuckGo fallback for when the knowledge base doesn't have an answer.
- Deployed as a FastAPI service on GCP handles a 500+ page PDF knowledge base with around 85% answer relevance and response times under 2 seconds.

Multi-Agent Research Assistant using LangGraph — *LangGraph, LangSmith, Gemini, Tavily Search*

- Built a planner–worker agent setup: one agent breaks a research query into subtasks, hands them off to search and summarization agents, and compiles everything into a structured report.
- Tracked the whole pipeline end-to-end with LangSmith; turned what used to be a 2–3 hour manual research process into something that finishes in under a minute.

Adaptive RAG Agentic AI Chatbot — *LangGraph, FastAPI, Qdrant, MongoDB, OpenAI, Streamlit*

- Built an agentic RAG chatbot that routes each query across three paths — vector search, general LLM, or live web search depending on what the question actually needs.
- The router picks the right pipeline about 90% of the time backed by Qdrant for vectors and MongoDB for persistent chat history across sessions.

EDUCATION

B.Tech, Computer Science and Information Technology *Sage University, Indore* Current CGPA : 7.64 2024 – 2028 (Expected)

CERTIFICATIONS

- Ultimate RAG Bootcamp using LangChain, LangGraph and LangSmith (Udemy)
- 100 Days of Code: The Complete Python Pro Bootcamp (Udemy)
- Databases and SQL for Data Science with Python (Coursera)
